

Jeet kay Geo

Competitive skill gaming with transparent, auditable records

Built for controlled public launch

10

playable skill games

50

players per public room

5

open rooms per game/ticket
selection

1

closed in-app recorded wallet

External settlements remain outside the platform; the application records references, status history, and administrator actions.

What players can do

A simple path from account approval to competitive play

1

Create account

Submit name, username, email, phone, and password for administrator approval.

2

Choose a room

Filter by game and ticket price or use Quick Match.

3

Play securely

One-time game-session credentials and deterministic server replay protect score integrity.

4

Review results

See leaderboard rank, prize status, game history, and recorded wallet movements.

Ten competitive skill games

Short sessions designed for repeatable, measurable play

1

Falling Blocks

Server-validated score

2

Snake Rush

Server-validated score

3

Memory Sprint

Server-validated score

4

Speed Tiles

Server-validated score

5

Reaction Tap

Server-validated score

6

Math Sprint

Server-validated score

7

Aim Trainer

Server-validated score

8

Word Sprint

Server-validated score

9

Color Match

Server-validated score

10

Number Dash

Server-validated score

Wallet and settlement records

Designed for auditability without a built-in payment gateway

Recorded wallet

- Available balance, reserved entry, prize balance, and pending payout are tracked separately.
- Every balance-changing event stores before/after values and a hash-chain integrity record.

External deposit

- User records amount, method, sender contact, and external reference.
- Administrator approves or rejects the record; wallet credit occurs only after approval.

External withdrawal

- Requested amount moves to pending status for review.
- Administrator records payout reference/proof or rejects and restores the balance.

Important: Jeet kay Geo does not itself process, hold, send, or receive money.

Security and control

Launch controls protect accounts, sessions, scores, and administrator actions

Account security

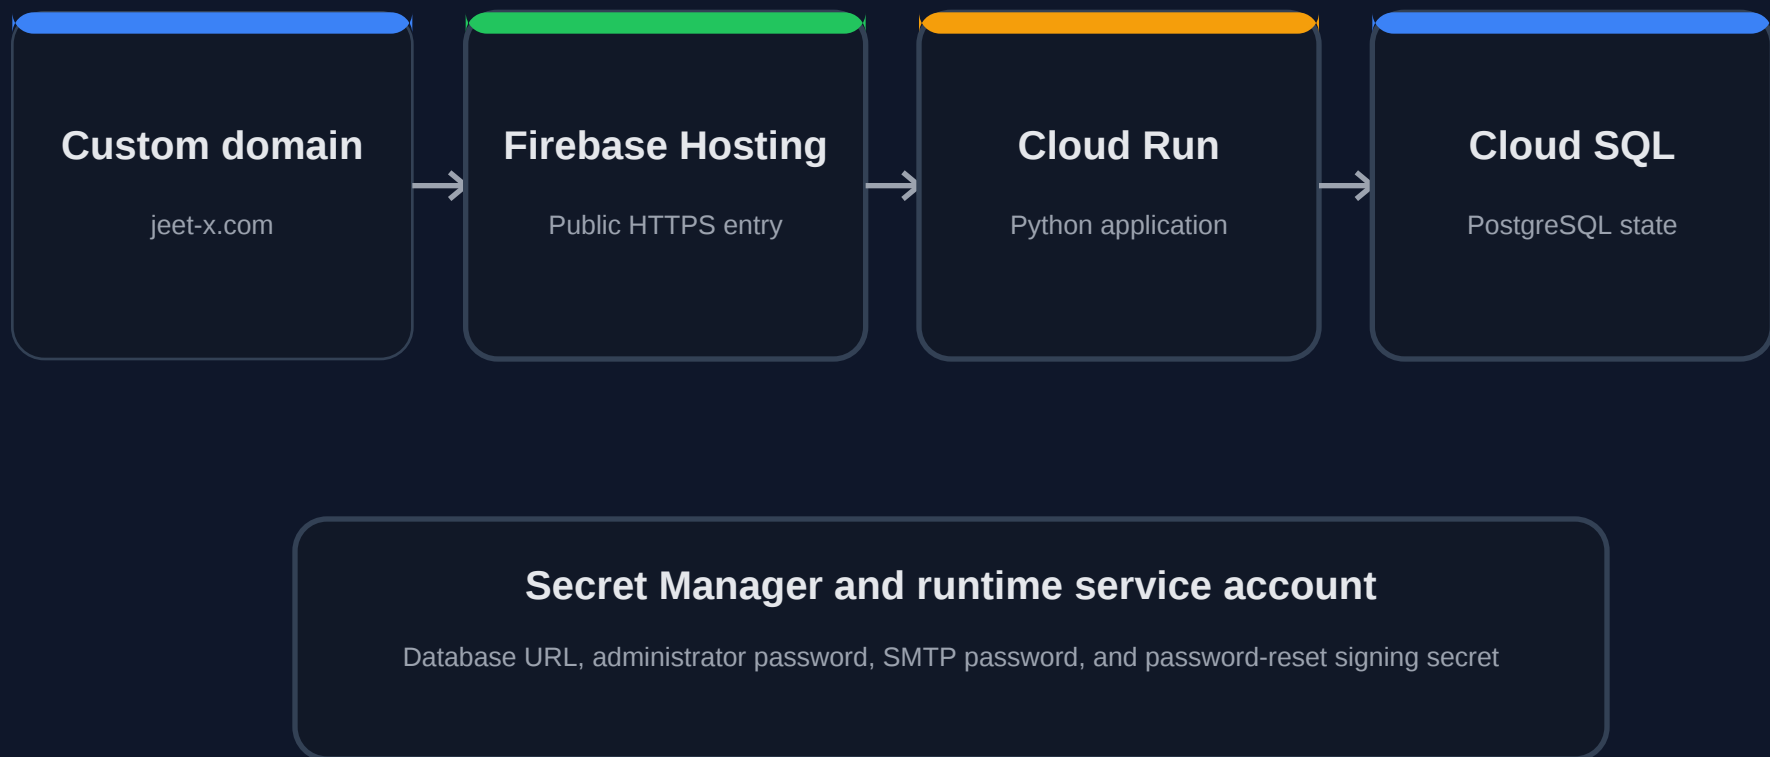

- PBKDF2-SHA256 password hashing.
- Secure HttpOnly SameSite cookies through Firebase Hosting.
- CSRF protection for authenticated actions.
- SMTP password-reset links are signed, time-limited, and single-use.

Operational control

- Administrator approval before login.
- Protected payment, prize, account, and risk actions.
- Append-only audit logs and CSV exports.
- Cloud SQL PostgreSQL persistence for multi-instance Cloud Run.

Public deployment architecture

Google Cloud Run + Cloud SQL + Firebase Hosting + custom domain

Ready for controlled public launch

Deployment package includes application, infrastructure scripts, checks, and this PDF

Included

- Cloud Run and Cloud SQL deployment script.
- Firebase Hosting deployment script.
- Automated unit, smoke, launch, security, and JavaScript checks.
- Presentation PDF available directly from the public home page.

Before accepting users

- Configure a real support email and SMTP app password.
- Review local legal, skill-gaming, consumer-protection, tax, and payment requirements.
- Test registration, approval, login, reset email, game flow, records, and administrator exports.

Jeet kay Geo

Play skillfully. Compete transparently. Keep every record auditable.
